Glenwood Regional Medical Center Announces Reopening of Sixth Floor Telemetry Unit and Welcomes New Director of Telemetry Services

West Monroe, Louisiana – Glenwood Regional Medical Center is pleased to announce the reopening of its Sixth Floor Telemetry Unit, marking a meaningful step forward in the hospital's ongoing efforts to strengthen services and support the health needs of the community.

The Sixth Floor Telemetry Unit is dedicated to caring for patients who require continuous cardiac monitoring and closer observation. With advanced monitoring capabilities and a highly skilled team in place, this unit expands Glenwood's ability to care for more patients locally, including accepting transfers from rural hospitals and regional facilities that need support managing higher-acuity cases.

As part of this new chapter, Glenwood is proud to introduce Chelsea Munn, MSN, RN, as the new Director of Telemetry Services. Chelsea brings with her experience in nursing leadership, with a strong background in clinical care, team development, and quality outcomes.

"This reopening reflects our forward momentum and our commitment to meeting the evolving healthcare needs of our community," said Chelsea. "It also symbolizes the resilience and dedication of our team as we continue to move through a period of growth and renewal."

Sandy Goss, BSN, RN, Chief Nursing Officer, has also played a key leadership role in this process, helping guide both clinical readiness and operational planning for the reopening. "Chelsea brings a calm, capable leadership style and a clear vision for excellence in telemetry care," Sandy added. "We're excited to have her as we reestablish this vital unit."

The reopening of the Sixth Floor Telemetry Unit reflects more than just expanded services, it represents Glenwood's commitment to progress, accountability, and putting patients first. As the hospital continues its path forward, efforts remain focused on investing in people, improving access to care, and strengthening the trust of the community. Glenwood remains dedicated to delivering safe, dependable, and compassionate care, today and into the future.

About Glenwood Regional Medical Center

Glenwood Regional Medical Center, a 278-bed, state-of-the-art hospital located in West Monroe, Louisiana, remains committed to providing patients and their physicians access to the latest medical breakthroughs and innovations in heart and vascular care. Our comprehensive health care services include emergency care, heart care, advanced surgical procedures, diagnostic imaging, therapy services, and treatment for a wide range of medical conditions. Equipped with advanced medical technology and staffed by highly skilled health care professionals, Glenwood is dedicated to delivering high-quality care in a welcoming and friendly hospital environment.

Glenwood is a critical hospital in Northeast Louisiana's health care delivery system, with over 600 team members and medical staff dedicated to providing safe, high-quality patient care. Recently, Glenwood received a Quality Improvement award from the Louisiana Hospital Association, highlighting its achievements in targeted improvements related to Preventable Harm, Anticoagulation Safety, Hypoglycemic Management, Infection Rates, Mortality, and Readmissions.
